Please review the following changes/additions to Invitation to Negotiate (ITN) No. 13-28-MH Proteomics Laboratory for TEDDY Study to be addressed in submitted proposals:

We received a request for clarification regarding the demographics table in Addendum #1

Based on the demographics table from the ADDENDUM #1 ITN 13-28-MH, the samples indicate the number of cases is 437.
Are these 437 the number of participants diagnosed with T1D or the number of participants with AAB positive?

For clarification note the following:
The 437 cases number in Addendum #1 represents a combination of both antibody positive subjects and T1D subjects. We selected the cases and controls over a year ago for lab analyses so that is why the combination of the two groups in the table (437) is less than what was stated in the original ITN (numbers were current as of one year later).
Addendum No. 2

Note: Please note receipt of this addendum by signing and returning with your proposal response.
