SECTION I: INTRODUCTION

Purpose of ITN
The University of South Florida Board of Trustees, a public body corporate of the State of Florida, hereinafter the “University”, intends to negotiate multiple agreements on behalf of the TEDDY Study for investigators interested in analyzing interactions between environmental and genetic factors contributing to development of autoimmunity and type 1 diabetes (T1D). We invite Proposals from qualified Providers of Data Analysis Services to submit a proposal to perform the services as described in the specifications below. Through this process the University desires to negotiate the best value agreement(s) for the University.

This TEDDY Data Analysis project is funded through a grant by the Helmsley Charitable Trust. The Helmsley Charitable Trust supports nonprofits and other mission-aligned organizations in the U.S. and around the world in health, place-based initiatives, and education and human services. The Trust currently holds more than $5 billion in assets and has committed more than $1 billion since we began active grantmaking in 2008. The Trust’s Type 1 Diabetes Program partners with key players across the T1D ecosystem – patients, physicians, researchers, caregivers, other funders, government agencies, pharmaceutical companies, device makers, insurers and grassroots and community organizations – in order to accelerate the development of devices, therapies and services that ease the burden of living with T1D. To date, the program, which has rapidly become the largest private foundation funder in T1D, has made in excess of 300 grants totaling more than $240 million in pursuit of this goal.

Vendor’s proposals will be evaluated based on the requirements set forth in this Invitation to Negotiate. The University reserves the right to reject any or all proposals.

Vendors may be required to answer questions and may be required to make a presentation to the evaluation committee regarding their qualifications, experience, service, and capability to furnish the required service(s).

The award(s) shall be made by the University to the most responsive and responsible vendor whose final proposal is determined to be the most advantageous to the University taking into consideration price and other criteria as set forth in the Invitation to Negotiate.

The University’s intent is to award to multiple vendors.

10. PROPOSAL TABULATION

Vendors desiring a copy of the proposal tabulation for the Invitation to Negotiate may request a copy via email to the ITN point of Contact Michael Hernandez mahernandez@usf.edu. Proposal tabulation will be available after award and will be posted on the Purchasing website. The proposal tabulation is an accounting of initial proposal information received relative to requested information and may not include price information. Proposal results will not be given out over the telephone.
11. **THE INVITATION TO NEGOTIATE PROCESS**

The ITN process is a flexible procurement process that is used when highly specialized and or variable services or products are required. Negotiations offer an opportunity for selected Vendor(s) to discuss their responses with an evaluation committee. The goal of this comprehensive process is for identification of the optimal outcome or the solution that best meets the needs of the University. Only representatives of the participating Vendors who are authorized to negotiate and make agreements shall be involved in negotiations.

12. **EVALUATION CRITERIA**

Evaluation will be based on criteria identified in the Section III - Specifications. Any information a Vendor deems essential to the evaluation of the services offered, for which no provision is made in the ITN, should be clearly stated in the proposal. While the University reserves the right to request additional information or clarification from Vendors at any time in the process, Vendors should not assume that they will be allowed to amplify or modify their initial written proposal. The initial response must be a clear and easy to understand explanation of the products, services, benefits and prices offered and should include information as to how all specifications will be met.

13. **NEGOTIATION WITH VENDORS**

To identify vendors for negotiations, submitted proposals will be evaluated, presentations may be requested, and references may be verified and reviewed. The University will compare the proposals according to the evaluation criteria described in SECTION III for the purpose of identifying vendors for negotiation. The evaluation criteria does not necessarily determine the best value for the university or the award to be made.

Vendors may be invited to continue in the negotiation process. Negotiations offer an opportunity for the selected Vendors to discuss their offers and proposals in further detail with the University. Selected vendors may be given the opportunity to refresh their initial offers. Refreshed proposals allow vendors to match or exceed the offers made by competitors, both as to services and cost. This allows the University to secure services which best meet its needs, at a highly competitive and favorable cost. At the conclusion of this negotiation process, the University may ask selected vendors to submit a written best and final offer, to memorialize all agreements reached during negotiations and to extend additional benefits to the University, if desired. Invitation to submit a best and final offer is not automatic. After this negotiation a final Vendor(s) may be selected.

14. **INVITATION TO NEGOTIATE FORM**

All proposals shall be submitted using the University of South Florida Invitation to Negotiate form as a cover to be considered for an award of the proposal. The form shall be completed in ink or typewritten, signed by an authorized signatory of the Vendor and returned with the proposal in a sealed envelope. Vendor is responsible for marking the outside of the sealed envelope with the proposal number and the opening date.

The Invitation to Negotiate form and all related pages are a legal document and cannot be altered by the Vendor in any way. Any alteration made by a Vendor may disqualify the proposal and the response may be considered invalid. Any necessary changes to an Invitation to Negotiate document will be implemented by written addenda to the proposal issued by Purchasing & Property Services.

15. **RIGHT TO NEGOTIATE**

Upon evaluation of the responses, the University has the right to enter into negotiations with one or multiple Vendors that appear to have submitted proposal(s) that best meet the needs and requirements of the University. Negotiations could include but are not limited to price and the terms and conditions of this ITN.

If for any reason a Vendor(s) and the University cannot arrive at a mutual agreement that would result in the issuance of a contract, the University reserves the right to terminate negotiations, to reject the proposal(s), and to continue negotiations with other responsive Vendors that may lead to the issuance and award of a contract.

16. **VENDOR’S RESPONSIBILITY**

It is understood and the Vendor hereby agrees that it shall be solely responsible for all services that it proposes, notwithstanding the detail presented in the Invitation to Negotiate.
17. **VENDOR’S EXPENSE**

All proposals submitted in response to the ITN must be submitted at the sole expense of the Vendor, whether or not any agreement is signed as a result of this Invitation to Negotiate. Proposers will pay all costs associated with the preparation of proposals and necessary visits to campus and other required site visits.

18. **NUMBER OF PROPOSALS SUBMITTED**

Vendor shall submit one (1) original proposal—clearly mark as "original" and one (1) copy. Vendors must also submit one (1) Electronic copy preferably on a flash drive. Proposals that do not include all of the requested copies may be disqualified at the sole discretion of the University of South Florida.

19. **PROPOSAL REJECTION**

The University shall have the right to reject any or all ITN proposals and in particular to reject an ITN proposal not accompanied by data required by the Invitation to Negotiate or an ITN proposal in any way incomplete or irregular including the omission of pricing information. Conditional ITN proposals may be considered non-responsive.

20. **OPEN COMPETITION**

The University encourages free and open competition among vendors. Whenever possible, specifications, invitations to negotiate, and conditions are designed to accomplish this objective, consistent with the necessity to satisfy the University’s needs and the accomplishment of a sound economical operation. The Vendor’s signature on their ITN proposal guarantees that the prices quoted have been established without collusion with other Vendors and without effort to preclude the University from obtaining the lowest possible competitive price.

21. **ORAL PRESENTATION**

After ITN proposals have been opened, Vendors submitting ITN proposals may be requested, at the sole option of the University, to make oral presentations or provide written clarifications. Such presentations or clarifications will provide an opportunity for the Vendor to clarify the proposal. Oral presentations may be recorded. Recorded oral presentations and written clarifications will be affixed to the Vendor’s ITN proposal and become part of the same as if originally submitted.

22. **MISTAKES**

In the event of extension error(s), the unit price will prevail and the bidder's "Total Offer" will be corrected accordingly. In the event of addition error(s), the extended totals will prevail and the bidder's "Total Offer" will be corrected accordingly. Bidders must check their bid proposals for any such errors and state the discount(s) in the proposal, where applicable. Failure to do so will be at the bidder's risk.

In the event a mistake results in the written request of a Vendor withdrawing any part of the proposal, the Vendor must withdraw the entire proposal package and the University will not consider that proposal for award of ANY of the subject ITN. This applies to all requests for withdrawal. The only exception to this policy would be a case where the mistake was the result of misinformation unknowingly supplied by the University. In this event, a waiver of policy must be approved by Purchasing whose decision shall be final.

Vendors must check their proposals for any errors. Failure to do so will be at the Vendor's risk.

23. **RIGHT TO TERMINATE**

In the event any of the provisions of the contract are violated by the successful proposer, the University may serve written notice upon Vendor of its intention to terminate the contract. Such notice will state the reason(s) for the intention to terminate the contract. If the violation does not cease and satisfactory arrangements for correction are not made within ten (10) days after the notice is served upon the Vendor, the contract shall cease and terminate. The liability of the Vendor and/or his surety for any and all such violation(s) shall not be affected by any such termination.
24. **CANCELLATION**

For the protection of both parties all contractual obligations shall prevail for at least 90 days after the effective date of the contract. After that period, for the protection of both parties, this contract may be cancelled, in whole or in part, by either party by giving thirty (30) days written notice to the other party.

25. **FORCE MAJEURE**

No default, delay or failure to perform on the part of the either party shall be considered a default, delay or failure to perform otherwise chargeable, hereunder, if such default, delay or failure to perform is due to causes beyond either party’s reasonable control including, but not limited to, strikes, lockouts or inactions of governmental authorities; epidemics; acts of terrorism; war; embargoes; fire; earthquake; acts of God; or default of common carrier. SECTION III: BID SPECIFICATIONS

I. PURPOSE
The Environmental Determinants of Diabetes in the Young (TEDDY) study intends to award funding to investigators interested in analyzing interactions between environmental and genetic factors contributing to development of autoimmunity and type 1 diabetes (T1D). SNPs data are available on nearly the entire TEDDY cohort. Microbiome, viral metagenomics, metabolomics, gene expression, proteomics, and dietary biomarkers data are available from the TEDDY case-control population. Additional data collected as a part of the TEDDY study include dietary intake, supplements, medications, parental education level, familial smoking habits, vaccinations, household exposures, illnesses, allergies, social groups, psychosocial stressors, life events, and more. Investigators should assemble a team that can design and conduct an analysis on the TEDDY cohort. For the scope of this project, all analyses will be supported by the technological infrastructure of the TEDDY Data Coordinating Center (DCC). Interested parties can download the TEDDY Data Analysis Application and the TEDDY Data Analysis Application FAQ's from the USF Purchasing web site, both are attachments to the ITN 15-11-MH http://usfweb2.usf.edu/purchasing/purch2.htm.

Additional information on the TEDDY study can be found at https://teddy.epi.usf.edu. Information on the TEDDY nested case-control study can be found in Biomarker discovery study design for type 1 diabetes in The Environmental Determinants of Diabetes in the Young (TEDDY) study. The University of South Florida (USF) will issue a subcontract to a laboratory or laboratories that will analyze the data that is being generated by the TEDDY study. The due date for the submittal of proposals is 3:00pm EST on February 19, 2015. Offerors (the applicants) are hereby advised that any proposal received after this date will not be considered further and will be returned unopened. The award is anticipated on or about March 31, 2015.

Each offeror, by submitting a proposal, agrees that the proposal shall remain firm for a period of 120 calendar days after the proposal is due.

Each offeror is requested to submit a letter of intent to respond to this ITN by January 26, 2015. Letters should be sent via email to Michael Hernandez, Purchasing Manager, Purchasing Services, 4202 E. Fowler Ave., AOC200, Tampa, FL 33620 (Phone: 813-974-8123; Fax 813-974-5362; Email: mahernandez@admin.usf.edu).

All full proposals will be reviewed by an independent review committee for their scientific merits. USF will send an Invitation to Negotiate (ITN) to the most meritorious applicants that fit the programmatic aims and goals of this ITN.

An ITN does not commit the University of South Florida to award a contract or to pay any costs incurred in the submission of the proposal, nor to procure or contract for any supplies or services. Each offeror must submit one original, one hard copy, and one electronic copy, preferably on a flash drive, of the proposal to Purchasing Services.

II. BACKGROUND AND PLANNING
Type 1 diabetes (T1D) is one of the most common and serious chronic diseases in children and appears to be increasing globally, particularly in the very young. The etiology of the disease remains unclear but the earliest indication is the appearance of one or several islet autoantibodies. There is a substantial genetic susceptibility to T1D. High risk HLA class II alleles appears to contribute 40-45% of genetic risk and other genes have also been identified as providing more modest contribution to risk. However, additional unidentified factors are important in the etiology of this disease.

Epidemiologic patterns suggest that viruses, nutrition, toxic agents or socioeconomic psychosocial factors may contribute to the etiology alone or in combination. Elucidation is confounded by the long interval between exposure followed by the development of islet autoantibodies and onset of clinical disease as well as the interaction of multiple genes, insults, or both, which appear to interact in a complex manner. Numerous studies have investigated environmental influences but have yielded conflicting results. This may be in part due to the failure to account for genetic susceptibility, begin observation at early ages or in utero, and/or monitor subjects long term and frequently. It is also important to recognize that islet autoimmunity marked by autoantibodies to islet autoantigens such as insulin, GAD65, IA-2, and ZnT8 may precede the clinical onset of diabetes by months or years.
A. Description of the Protocol

The Environmental Determinants of Diabetes in the Young (TEDDY) study investigates genetic and genetic-environmental interactions, including gestational infection or other gestational events, childhood infections or other environmental factors after birth, in relation to the development of pre-diabetic islet autoimmunity and T1D. Beginning in 2002, a consortium of six centers assembled to participate in the development and implementation of studies to identify environmental factors that trigger the development of islet autoimmunity and T1D in genetically susceptible individuals. The TEDDY study has recruited 7,749 neonates from the general population with a pre-determined T1D risk of 3% and 919 neonates with first degree relatives who have T1D and who have a pre-determined T1D risk of 10%, by age 15 years. Thus, TEDDY proposes to continue to follow a total of 8,668 participants across six clinical centers worldwide (Finland, Germany, Sweden and three in the US). The first primary outcome measure is appearance of one or more islet cell autoantibodies; GADA, IAA, or IA-2A confirmed at two consecutive visits and it is expected that approximately 800 subjects will develop autoantibodies during the entire course of the study. The second Primary Outcome is development of clinical T1D. It is expected that 400 subjects will develop T1D during childhood and adolescence. The TEDDY study has completed enrollment in 2010 and as of now over 500 subjects have developed persistent islet autoantibodies, and 195 of these subjects have developed clinical diabetes. We are conducting case-control analysis using different omic technologies and would like to apply different analysis methodologies.

The participants are being followed with blood sampling every three months for islet autoantibody measurements until age 4 years and then at least every six months until the age of 15. After the age of four, autoantibody positive subjects continue to be followed at 3 month intervals and autoantibody negative subjects are followed at six month intervals. In addition to the analysis of autoantibodies, the primary endpoint of the study, additional data collection is performed and blood samples are taken at each visit. The parents collect monthly stool samples in early childhood. The parents also fill out questionnaires at regular intervals in connection with study visits and record information about diet and health in the child’s TEDDY Book between visits. Continued long-term follow-up of the currently active TEDDY participants will provide important scientific information on early childhood diet, reported and measured infections, vaccinations, and psychosocial stressors. Details of the TEDDY protocol are available in the following articles: - Hagopian WA, Erlich H, Lernmark A, Rewers M, Ziegler AG, Simell O, Akolkar B, Vogt R Jr, Blair A, Ilonen J, Krisher J, She J; TEDDY Study Group. B. Design of the Case-Control Study

The TEDDY nested case-control study includes samples of children who have developed autoantibodies or have been diagnosed with type 1 diabetes, and age matched controls samples, that are being analyzed in TEDDY laboratories for the gut microbiome, gene expression, proteomics, metabolomics and dietary biomarkers. A TEDDY subject who developed one of the two primary outcomes (persistent confirmed IA and/or T1D) was defined as a case. A TEDDY subject who had not developed persistent confirmed IA by the time that the case to which it is matched developed IA, within ±45 days of the event time was defined as a control for that case. A TEDDY subject who had not been diagnosed as T1D, within ±45 days of the event time was defined as a control for a case of T1D. The cases and controls were matched by clinical center, gender and family history of T1D to control the differences in genetic background and in sample/data handling between clinical centers. Because of sample assay costs, the selection of three controls per case was planned for the dietary biomarker and metabolomics samples (1 : 3 matched), and one control per case was planned for gene expression and metagenomics samples (1 : 1 matched). Two separate nested case-control studies were planned for persistent confirmed IA and T1D; 95 cases were identified for both T1D and persistent confirmed IA, 323 persistent confirmed IA cases were not diagnosed with T1D, and 19 cases developed T1D without previously meeting the criteria for a persistent confirmed IA. The number of samples that were processed for each analyte is provided in Biomarker discovery study design for type 1 diabetes in the The Environmental Determinants of Diabetes in the Young (TEDDY) study. Lee HS, Burkhardt B, McLeod W, Smith S, Eberhard C, Lynch K, Hadley D, Rewers M, Simell O, She JX, Hagopian W, Lernmark A, Akolkar B, Ziegler AG, Krischer J, and the TEDDY Study Group. Diabetes/Metabolism Research and Reviews. Epub 2013 December 15. doi: 10.1002/dmrr.2510 (PubMed ID: 24339168).

C. Data Availability

SNP typing was done on virtually all TEDDY children. Microbiome and dietary biomarkers data are available from the TEDDY case-control population. Metabolomics, gene expression and proteomics data are being generated. Whole
genome sequencing of the cases and controls will soon be initiated as well. Thus, TEDDY has the following available datasets:

1. Environmental exposures such as breastfeeding, detailed composition of dietary intake, clinical infections, allergies, illnesses, medications, pets, daycare, psychosocial stress (questionnaires and salivary cortisol), height and weight, accelerometer movement measurements, biomarkers of nutrient levels (vitamin D, fatty acids, etc.), biomarkers of puberty, urine metabolites, saliva, etc.
2. Diabetes endpoints of diabetes autoantibodies (GAD, IA2, IAA, ZnT8) and clinical type 1 diabetes by HbA1c, direct glucose, or OGTT testing.
3. Direct sequence genotypes at HLA DRB1, DQA1, DQB1, and for a portion of the subjects also HLA-B, HLA DRB3, HLA DPA1, HLA DPB1
4. Stool microbiome and viral metagenomics whole shotgun sequencing and bacterial 16S data are available now; 18S, primary virome, and cultured virome data will be available of August 2015.
5. Plasma microbiome and viral metagenomics bacterial and virome shotgun sequencing, 16S, 18S, and cultured virome on human cell lines will be available as of August 2015.
7. Metabolomics of plasma processed on multiple platforms will be available as of July 2015.
8. Gene expression on the Illumina HT-12 platform will be available as of November 2015.
9. Whole genome sequencing (1100 individuals as part of the nested case-control study) on the Illumina X10 will be available as of February 2016.
10. Proteomics from plasma analyzed by two kinds of mass spectrometry will be available as of June 2018.

TEDDY is thus a complex project that is generating large, complex, multidimensional, and diverse datasets, and is encouraging partnerships to assist in its analysis as major changes in biomedical research technologies and methods have shifted the bottleneck in scientific productivity from data production to data management, communication, and interpretation. Successful collaborators will need to have tools to manage and the capability to integrate and analyze the diverse data types for example -omics, phenotype, clinical, diet, exercise, environmental, behavioral, and lifestyle data, to help predict disease risk and mine the data to help identify correlates of progression to autoimmunity and disease.

D. Technological Infrastructure
For the scope of this project, all analyses will be supported by the technological infrastructure of the TEDDY DCC at USF. Investigators will receive access to USF’s 400 node high-performance computing (HPC) research cluster with approximately 6,400 processor cores created to support the demand for complex high performance analytical processes and pipelines. The HPC is part of the TEDDY Data Coordinating Center’s (DCC) Big Data ecosystem. The DCC has a direct high-speed connection to the secure HPC. The DCC’s IT team can leverage their existing Big Data Infrastructure for large scale data storage and big data analytics with the HPC. The research cluster at the University of South Florida utilizes parallel processing for running advanced application programs efficiently, reliably and quickly and is administered by the USF Research Computing group. Big Data Infrastructure is a horizontally scaling computing and storage system that consists of 500 terabytes Hadoop cluster with 336 core processing units, 30 nodes and 1,792 gigabytes of memory, allowing investigators to store and process clinical, lab and genetic data.

The DCC developed a large scale data warehouse to provide enhanced data extraction, transformation, and loading of data for analytical consumption. The data warehouse provides historical snapshots of aggregate data used for ad-hoc queries and reporting. It consists of a hub and spoke architecture providing business users with the ability to keep existing data marts to suit their needs. Aggregated datasets are replicated and stored within the data warehouse, both to protect the integrity of research data from the real-time churn of system transactional data and to keep datasets specific to one researcher or manuscript in a separate, pristine state.
